What is iBooking

iBooking is designed to work seamlessly with Outlook, making meeting room booking much easier never than before. *iBooking* is a real time meeting room booking solution that increase the productivity use of your meeting room resources and prevents both double booking and forgotten cancellations. With *iBooking*, you can now integrate with your existing Outlook calendar for meeting room booking purposes, customers use *iBooking* system to send meeting request to invite parties to join the meeting. The meeting schedule can be broadcasted to LCD display at real time. If a meeting is rescheduled or cancelled, the meeting schedule will be automatically updated in the LCD display as well.

With *iBooking* you can centrally manage your meeting room booking and keep everyone in the office informed of the booking status. Management can see the meeting room booking utilization report for review purposes.

Dashboard management of all your meeting rooms, equipment and resources

With the system dashboard management tool, users can manage all their bookings and booking status,

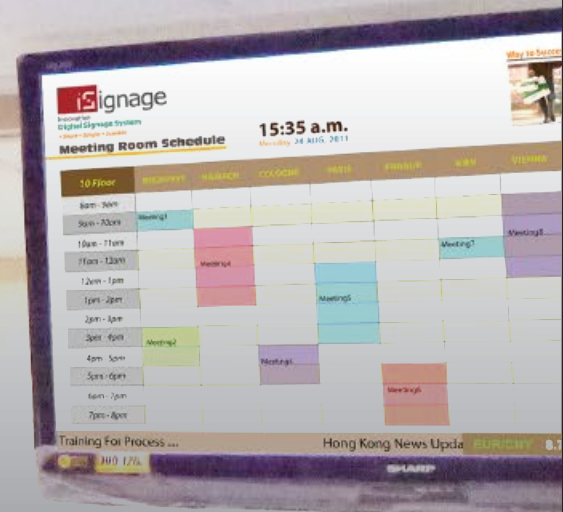

check who will join the meeting and any resources and equipment booked for the meeting.

Check meeting room availability at your home screen

iBooking allow you to check the meeting rooms and resources availability and make the booking at your finger tip almost effortless.

4 Steps to complete the booking request

Even users without technical training can use the *iBooking* System to book meeting room and invite attendants without any problem. With the *iBooking* system intuitive UI design, the system will guide user to complete the booking request in just 4 steps.

Maximize your company resources utilization

The *iBooking* system is not just a meeting room booking tool, it also helps your company to maximize the company resources by allocating the right resources at the right time to the right party. *iBooking* system make use of the meeting space in the most efficient way. Apart from the meeting room booking purposes, *iBooking* system can also allow user to book equipment, catering service etc.

Management report at a glance

Management by using *iBooking* system to check which meeting room has the highest usage rate, which department/organizer use meeting room most frequently, the management can also tell how the meeting rooms utilization rate, and how long the meeting last. All these information are useful in planning meeting room resources to cope with company expansion.
